

## **TRANSMISSION CAPACITY AND SYSTEM DEVELOPMENT MAPS**

ENTSOG's Transmission Capacity map provides an overview of Europe's main high pressure transmission lines and gives information on technical capacity at cross-border points.

The System Development map (published jointly with GIE) provides a compact and regular overview of existing gas infrastructure and outlook for its development as well as of actual supply and demand situation at both the European and national level from the perspective of a respective year. It aims at establishing an easy reference for such information and at mapping trends and their development over time.

Both maps contribute to enhanced transparency of the gas market for market participants.
